

LockDry® Aluminum Marine Decking

The **#1 choice** for new marine decking or for refurbishing aging boat docks, boardwalks, bridges and walkways.

LockDry® is the superior decking material in the marine industry. Unlike composite or wood, it will not split or splinter, retain heat or require constant maintenance.

LockDry's® powder coated finish and maintenance-free design eliminates the need for painting, staining, or waterproofing, and is virtually stain and mar-resistant.

LockDry's® patented locking seal and continuous gutter technology provides a gapless floor decking (and watertight upper deck or roof covering) with single-layer construction.

LockDry® Aluminum Marine Decking

Designed and Patented by FSI

- Aluminum decking is the superior product in the marine industry, unlike vinyl which may become brittle and chalky, or traditional wood that will splinter, retain heat, and require constant maintenance. The structural integrity of aluminum decking allows for a span of up to 36".
- Our exclusive LockDry® aluminum marine decking is the only material in the marine industry that is currently covered by a limited lifetime warranty.
- LockDry's® revolutionary patented locking seal and continuous gutter technology provides a gapless floor decking and roof covering with single layer construction.
- This maintenance-free product eliminates painting, staining and waterproofing and is stain, dirt and mar-resistant.
- Our exclusive Titan Alloy™ offers a minimum of 35,000 PSI compared to other alloys that offer only 16,000 to 24,000 PSI.
- The textured high density polyester powder coat finish is up to 3 times thicker than conventional finishes.
- LockDry's® finish meets or exceeds AAMA 2604 for Salt Spray Resistance and Outdoor Exposure testing in South Florida.
- The textured finish and fine ribbing provides a non-skid surface in wet conditions.
