Al

the building block of a superior dock

why aluminum?

For decades, aluminum has been a standard material used throughout the building and construction industries. Maintenance-free aluminum doors, siding, windows and roofing provide utilitarian, as well as decorative appointments on millions of homes, in varied climates and terrains.

Aluminum is used for soda cans and foil. How can it be strong enough for docks or railing?
Aluminum can range from very soft to very hard, based on the additions of other trace components and heat treating. Because of this versatility, aluminum is used in an array of products — from soda cans to aircraft. All aluminum extrusions used by FSI have a yield strength of 25-35,000 psi, while typical composite wood products measure only in the 1,000 psi range.

Since aluminum is a metal, won't it rust?
Aluminum does not contain iron. Without iron, aluminum cannot rust. Aluminum also does not absorb water, so it doesn't promote the growth of mold. Warping, splinters and rot are also non-existent.

Is aluminum more expensive than other materials?
No. It is competitively priced with other outdoor product materials. Consider too all the time and money saved on cleaners, sealers, stains and paint that wood and composite materials require for maintenance.

We build more than boat docks. We build your escape — the place where you reconnect with family, laugh with friends, or relax in soothing silence.

Our docks are for your life on the water, the way you live it. Flotation Systems' aluminum docks are designed to perfection and crafted without compromise. A vast array of options and accessories bring your vision to life. Together, we create a dock that is perpetually beautiful and uniquely yours.

Your home on the water.

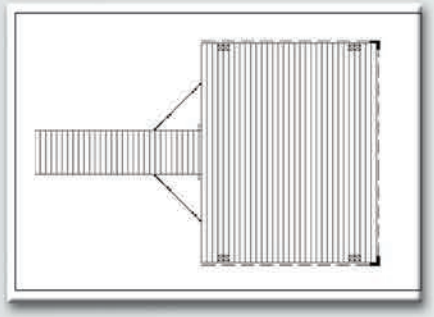

what is your style?

Fixed or Floating Standard Anchoring & Accessory Package Included on all Dock Styles

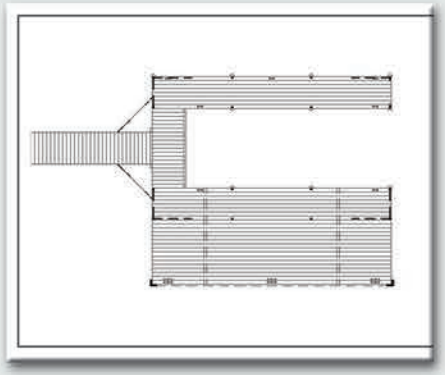

Doesn't aluminum get really hot?
In-house tests show that our aluminum products are up to 20 degrees cooler than alternative products in direct sunlight. Aluminum dissipates heat very quickly. With very little air flow, our aluminum products will stay close to the outside temperature. The powder coat finish also helps aluminum from absorbing heat.

How well does the powder coat finish hold up?
The powder coat finish is an extremely strong surface finish, is very UV stable and meets the AAMA 2604 standards for high performance architectural coatings. These industry standards require multiple tests and QC regulation for abrasion, adhesion, chemical hardness, impact and outdoor exposure. FSI has used powder coat finishes throughout the varied climates of North and Central America with outstanding results.

Platforms & Boat Slips

Simple and straightforward, a Flotation Systems aluminum dock pier is your bridge to the good life. Cross its threshold to your platform dock and enter a world where time passes effortlessly and night descends before you know it.

1

Ideal for private lakes, Flotation Systems' platforms and slip docks may be expanded by adding slips, a gable or hip roof at any time.

- Secure a play area for small children with picket handrails
- Protect your boat and PWCs with the addition of vertical bumper brackets to the platform or slip perimeter
- Available in stationary and floating configurations
- Standard anchoring systems and accessories
- Custom-designed in any size, shape or configuration to meet your recreational or entertaining needs

ALUMINUM BOAT DOCKS

cover up... Gable Roofs

Relax and play under a canopy of protection. Your boat, your possessions, you and your guests, all stylishly secure. You'll be as happy docked as you are on the water.

Dear Flotation Systems,
I just wanted to drop you a short note to let you know how pleased I am with my new boat dock. It has been a great experience and a pleasure dealing with your company. Not one day has gone by that someone hasn't stopped by to tell me how great the dock looks...

Ken Butera
Snellville,
Georgia

7

The most economical of our four covered deck styles, the double slip gable dock is considered "the most dock for the money." Though cost efficient, it commands the same detailing for which Flotation Systems is renowned.

- 10" heavy weight framing
- 26 gauge commercial high rib roof metal; 30-year color retention warranty
- All exposed roof edges are treated with matching trim
- Standard roof pitch is 3.5/12
- Stainless steel hardware

Optional features: Raised decorative ridge; stairs accommodate property with steep or high elevations; slip fill-in for additional shaded floor space; swim platforms and more!

care-free style...

Hip Roofs

Modern, yet timeless.

12

13

The clean lines of our hip roof covered boat dock adds stunning design to your shoreline and stylishly protects you and your watercraft under the sun and stars.

- Vented ridge cap allows for air flow and release
- 26-gauge commercial high rib roof metal with 30-year color retention warranty
- Visible roof edges are treated with matching trim for a finished, detailed look

Optional features: Extended roof overhang protects PWCs; decorative ridge cap; stairs for steep lots; removable slip fill-ins for additional shaded floor space

entertaining space... Sundecks

You all have done a wonderful job. We will have many years of enjoyment with our new dock.
Johnny & Beth Franklin, Smith Lake, AL

Sundeck boat docks add more than a chapter to your life on the water. They add a whole other story.

Flotation Systems sundecks offer double the space of a single-tier dock or platform. The hallmark construction is only the beginning – add unique enhancements, including swim platforms, shades, seating options and much more. From there, you write the tale of relaxation and entertainment. The options are many, but the choice is simple. Flotation Systems sundecks take waterfront style to a new level.

- Perfect for property with steep or higher elevation by attaching access ramp to upper deck
- Waterproof Lock-Dry® aluminum decking on second level shelters boats, PWCs and dock furniture
- Powder coated aluminum picket railings have been laboratory tested and surpass safety building codes
- Cantilevered stairs save deck space above and below

Optional features: Lockable gates for jump/dive platforms; gable & hip shades; custom water slides; upper deck corner benches; and much more!

Waterproof upper decks by

winning
Sundeck Combos

23

Flotation Systems sundeck combos take the best of a traditional sundeck and combine it with the protection of a dock roof. You gain 20 extra feet of dock space plus a sloped dock roof that keeps you, your boat and all your outdoor items safe from the elements.

And speaking of safety, our sundeck combos surpass all national building codes. We craft them from waterproof LockDry® aluminum decking and powder-coated aluminum fencing, making them as durable as they are attractive.

When you add accessories like lockable jump gates, corner benches, and custom waterslides, your sundeck combo will soon become everyone's favorite escape on the water.

Stationary Docks

galvanized steel, wood or concrete

Enjoy the benefits of maintenance-free aluminum construction on a stationary dock.

Our stationary docks are easily adaptable for wood, galvanized steel or concrete pilings. They are available in the same designs as the floating dock systems and will accommodate almost any type of overhead lift system.

"FSI and their authorized dealer exceeded my expectations in every way. There were no short cuts of "good enough" situations. It's been a long time since I had the pleasure of working with a company with such outstanding customer service and unbending standards of quality."

inside & out Technical Info

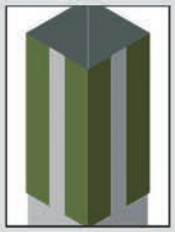

Please visit our website for roof, deck and railing color combinations: aluminumboatdocks.com

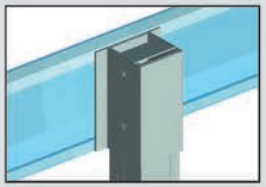

- Experienced in-house design team engineers each dock using 3-D CAD software for a more exacting fit and consistent components.
- Lower mainframe consists of 10" E-channel integrated throughout lower dock construction.

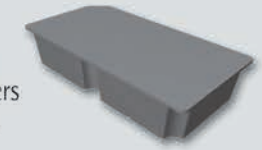

- Roof post bushing reduces noise by eliminating metal-to-metal friction.
- "Box" channel post and truss roof assembly creates a strong, reliable connection designed for the "long haul" life of your dock.

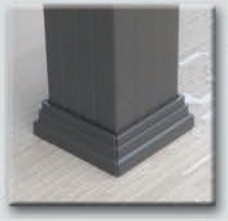

- Marine grade stainless steel hardware.
- Permafloat EPS billets are foam filled, rotomolded polyethylene encasements that meet or exceed all U.S. Army Corps of Engineers regulations; covered by our exclusive limited lifetime warranty*.

- Watercraft Super Cushion provides full corner protection especially at entrance to slips. Additional full Frame Wall Super Cushion available in the premier accessory package.

- Aluminum post molding included for a finished look – available in all powder coat color options.

Frames and roof trusses are match drilled and stamped. Decking is pre-cut and bumpers are pre-assembled.

Roof assembly (trusses, purlings, bracing) and overall structure are previewed and checked by quality control.

Metal for a hip roof system is pre-fitted, cut and labeled in-house for accuracy and easy on-site assembly.

Each dock is carefully packaged for safe on-site delivery.

**A limited lifetime warranty is available in some circumstances. Please visit www.aluminumboatdocks.com to download warranty terms and conditions or contact FSI at 1.800.711.1785 for a complete version.*

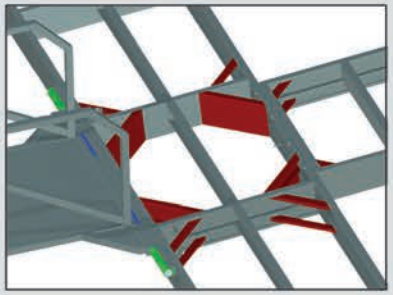

FLOTATION SYSTEMS, INC.®
ALUMINUM BOAT DOCKS

1 **Powder Coated Decking**
Upper decks feature gapless, waterproof LockDry® aluminum decking – the highest consumer rated decking product 2008-2011. LockDry® has a SuperDurable™ powder coat finish which is applied according to specification AAMA 2604 (higher than the typical AAMA 2603 spec in the market). SuperDurable™ has three to four times the thickness of wet, baked-on paints and a high impact resistance. It will not peel off like enamel finishes, is extremely durable to the elements and resistant to most chemicals and solvents.

2 All aluminum powder coated railings are laboratory tested and building code approved. Other railing design options available upon request.

3 True "piano hinge" ramp connection uses marine grade, solid aluminum UHMW bushing- encased hinge pin through aluminum 3/8" wall pipe incorporated in a full length track system welded to mainframe channel. Ideal for upper or lower level ramp attachments. Double diagonal gussets reinforce high stress locations.

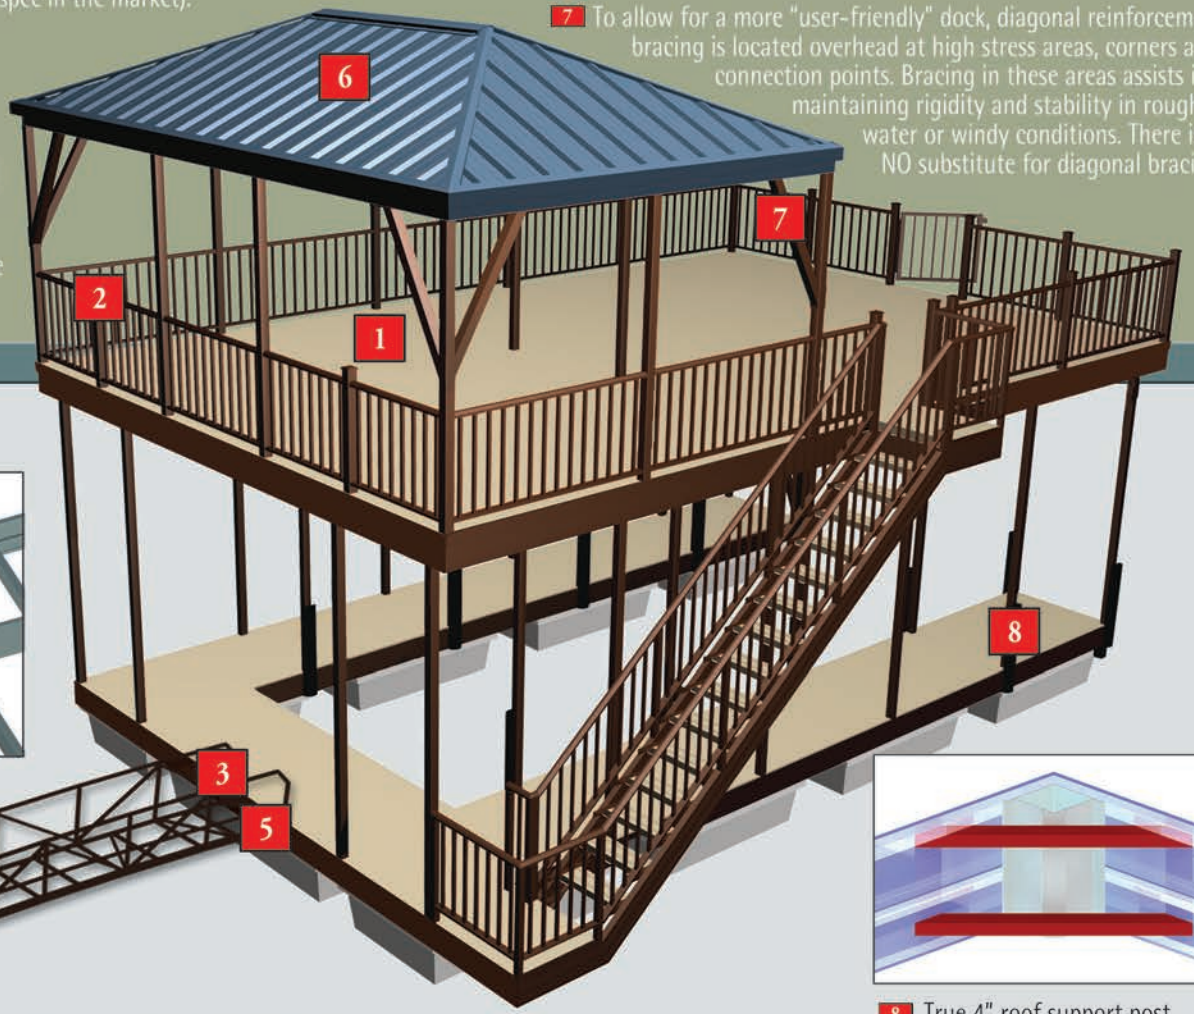

4 Arched bridge truss design in an all aluminum construction; 5' - 80' standard single span length. Reinforced ramp undercarriage available dependent on application and/or design.

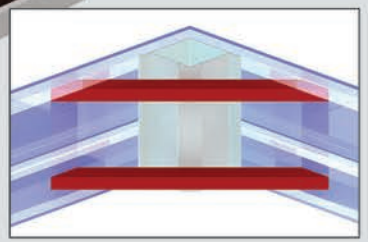

5 Diagonal webbing from ramp to mainframe channel gives a wider transfer of direct load and eliminates the need for ramp cables, which can require constant adjusting and maintenance.

6 26 ga. commercial high ridge roofing includes 4" perimeter trim for a finished "crown molding" look.

7 To allow for a more "user-friendly" dock, diagonal reinforcement bracing is located overhead at high stress areas, corners and connection points. Bracing in these areas assists in maintaining rigidity and stability in rough water or windy conditions. There is NO substitute for diagonal bracing!

8 True 4" roof support post with radius corners incorporate within the 10" E-channel lower mainframe. This creates an unmatched, welded double gusset assembly to better withstand extreme marine conditions.

Floating or Stationary commercial designs...

45

46

42

Aluminum is an ideal choice for commercial applications, due to its excellent properties. Commercial docks, regardless of size or configuration, are available in either floating or stationary, covered or uncovered.

Our staff is on hand to assist throughout the entire project from design drawings to technical support. We can provide design configurations that best suit specific shoreline footage limitations and layouts. We offer knowledgeable assistance through years of experience working with regulatory agencies, architectural groups, professional engineers, marine contractors and community associations.

43

44

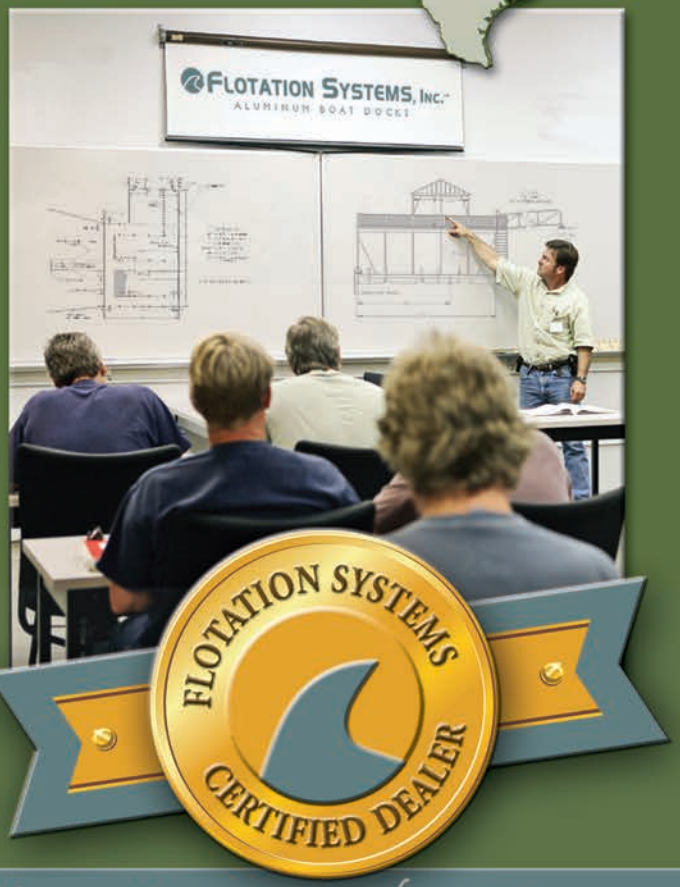

47

Flotation Systems' docks have been installed throughout the United States and Canada by our nationwide independent dealer network.

...superb work.

National Independent Dealer Network

Quality is among our top priorities. Commitment to customer service and support is #1. We honor that commitment by providing a turn-key solution to our customers through a nationwide network of independent dealers. These professionals ensure consistent follow-up, technical knowledge and are the direct and local line connecting you, the customer, to the manufacturing process.

Authorized, independent Flotation Systems' dealers receive training in engineering, manufacturing and installation. They are able to assist you by performing an early site visit to determine water depth, location of property lines in relation to dock placement, type of ramp and shore attachment and proper anchoring to suit your dock and its location. Dealers are also well versed in working with community residential boards and local governing bodies on permit regulations. In addition to service pre-installation, the FSI dealer also provides first class service after the sale. Ask your local independent FSI dealer about service and maintenance agreements. Call 1.800.711.1785 for a dealer near you!

"Flotation Systems' all-aluminum construction, combined with the shortest lead times and only lifetime warranty in the industry, guarantees my ability to offer customers the highest quality product on the market. FSI pre-assembles the dock prior to shipping, which minimizes mistakes and labor hours, saving the customer time and money. I am proud to offer this superior product!"

— Texas Marine Products, Authorized, Independent FSI Dealer

FLOTATION SYSTEMS, INC.®

ALUMINUM BOAT DOCKS

superior service.

Flotation Systems, Inc. (FSI) has set the industry standard for aluminum boat docks over the last two decades and is one of the largest aluminum dock manufacturers in the USA. In facilities of over 100,000 sq. ft, Flotation Systems is able to accommodate the rapid growth and nationwide development of lake property, while maintaining shorter lead times in the production of an industry standard-setting product. Dedicated to developing innovative designs, while leading the market in quality construction, Flotation Systems continually strives to offer the best product and service to its nationwide base of customers.

customer commitment.

Flotations Systems continues the tradition of offering a limited lifetime warranty* on residential boat docks installed by FSI or an authorized, independent dealer. The combination of high grade aluminum, stainless steel hardware and precise engineered construction makes "the best dock warranty you'll probably never need," consistent with the pride held for every part of the production and installation process. Multiple quality control check points ensure accuracy from time of purchase, to engineering and drafting, to manufacturing, staging, prep and loading. Flotation Systems and its nationwide independent dealer network is responsible for educating you before, during and after the sale to ensure that you are fully satisfied with your decision to choose a Flotation Systems aluminum dock.
